## Social Media- a Positive or a Negative impact?; A Study of the Psychological impact on Indians during the times of COVID - 19 Pandemic Lockdown

<sup>1</sup>Surity Brohmo Choudhury, <sup>2</sup>Ambalika Sarma Brahma Choudhury Associate Professor, Abhayapuri College, Assam <sup>2</sup>PhD Research Scholar, Brihan Maharashtra College of Commerce, Pune e-mail: suritybc@gmail.com, ambalika.sarma@gmail.com

#### Abstract

Social Media: a boon or ban? This research paper attempts to study the psychological impact of social media on its users. This is a exploratory paper with qualitative investigation. Thematic and sentiment analysis is done on the primary data collected. The primary data is collected through interviews and observation. The secondary data is collected from various books and journals. Data is collected from the social media platforms through Facebook and twitter mining. The research has divided the sentiments into negative and positive. It is found that social media has a negative psychological impact on majority of the users.

Keywords: Social Media, Psychological impact, Lockdown, COVID 19, Sentiment analysis

#### Introduction

The 2019-20 COVID - 19 Pandemic, the ongoing pandemic caused by the Coronavirus disease has become a world emergency. It has taken a toll on many lives around the world. This pandemic is a global health crisis which has an impact on every sector in the world economy. The spike in the rate of the contagion and the ways of transmission has threatened the social nature of human beings given the fact that the only way to combat the virus is through social distancing. In India also there is a sharp increase in the number of positive cases. On 24 March, the Government of India under Prime Minister Narendra Modi ordered a nationwide lockdown for 21 days, limiting movement of the entire 1.3 billion population of India as a preventive measure against the 2020 coronavirus pandemic in India.It was ordered after a 14-hour voluntary public curfew on 22 March, followed by enforcement of a series of regulations in the country's COVID-19 affected regions. The lockdown was placed when the number of confirmed positive coronavirus cases in India was approximately 500. On 14 April, Prime minister Narendra Modi extended the nationwide lockdown till 3 May, with a conditional relaxation after 20 April for the regions where the spread has been contained.

The decision of lockdown was tough on everybody, especially the ones staying away from their families. The biggest brunt is faced by the migrant workers and the daily wage earners. As their income source stopped, it has become difficult to meet their ends. The lockdown has left tens of millions of migrant workers unemployed. They're often from rural areas but live most of the year in India's megacities, serving as day laborers, construction workers or domestic help. Most are thought to have no savings. Many lived in factory dormitories, now shut, and got stranded when the government halted bus and train service last week. They're vulnerable to starvation and

#### Abstract

Increasing human population put significant impact on the wild-life habitats all over the globe. Guwahati, the largest city of North-Eastern part of India experiences the human-leopard conflict from last few decades. Studies advocate that once this region was a suitable abode for many animal species, especially for the leopards. But the growing urban built-up progressively shrinks the suitable habitation site for this species that leading to the frequent conflicts between man and leopard within the city region. Rapid decrease of leopard population and increasing incidences of encounters are the major concern for the sustainable conservation of the species. In this study, an effort has been made to evaluate the habitat suitability of leopards in Guwahati city region by using composite score method. Four parameters are considered to perform the spatial analysis such as leopard conflict locations collected using camera traps, pug marks/scat, and

#### Abstract

We study the consequence of a non-standard cosmological epoch in the early universe on the generation of baryon asymmetry through leptogenesis as well as dark matter abundance. We consider two different non-standard epochs: one where a scalar field behaving like pressure-less matter dominates the early universe, known as early matter dominates the early universe, known as early matter dominates (EMD) constitution (EMD) constitution.

#### Abstract

Da Silva and Sellers proved the existence of several families containing infinitely many congruences for  $PD_k(n)$  for various values of k, where  $PD_k(n)$  denotes the k-regular partitions with designated summands. They also conjectured a few more congruences. In this paper, we prove their conjectural congruences, and also present some new families of congruences modulo 8 for  $PD_{144k}(144n+t)$ , for  $t \in \{84,132\}$  and  $PD_{288k}(288n+180)$ .

#### 1. Introduction

Andrews, Lewis and Lovejoy [1] introduced partitions with designated summands, which are constructed by taking ordinary partitions and tagging exactly one of each part size. A partition is said to be k-regular is none of its parts is divisible by k. Let  $PD_k(n)$  denote the number of k-regular partitions of n with designated summands. The generating function of  $PD_k(n)$  is given by [1, Corollary 3]

 $\underline{\infty}$   $f_0 f_1 f_2, f_3,$

ost Colonialism is an intellectual way of thinking. The concept of post-colonialism was developed after the colonial countries had een independent. It has increasingly become an object of scientific study since 1950. Post colonialism deals with conflicts of entity and cultural belonging. Colonial powers gained control over so many Afro-Asiatic countries and a destroyed main part of the tter's native tradition and culture. It often led to conflicts when countries became independent and suddenly faced the challenge of eveloping self-confidence and a sense of nationalism. In European imperialists conquered a number of third world countries right from India and Middle East countries. The term 'Middle East' stands for over a dozen of countries situated in Africa and Asia. These countries were colonialized mainly by the European powers in different times under different political circumstances. Of course, all the countries won their freedom and gain independence after the World War II. In this context, Language is an intellectual medium by which post-colonial communication and reflection take place. A large number of writers and poets of different nations had been influenced with colonialism, whose feelings and reactions were expressed in their poems and writings. A lot of Indian books written in English can be attached to the era of post-colonialism. In this regard, it is quite relevant to mention here a few of the Indian authors who are associated with the post-colonial literature. Similarly, a good number of poets and writers of the middle East countries have dealt with the themes related to the post- colonial issues. They made significant contributions by writing in particular style, spirit and manner against the long running effect of colonialism, which have been able to establish a new perspective in Arabic literature. In this regard, it will necessitate throwing a light on the heroes of Arabic literature who deal with the post-colonial issues. It is an approach to post-colonialism and its trend in the Indo-Middle East literary perspective.
